

## The Flight Is The Reason!

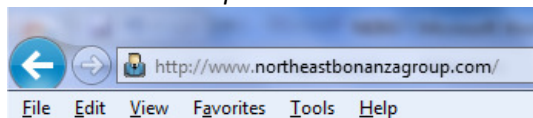

For once you have tasted flight you will walk the earth with your eyes turned skywards, for there you have been and there you will long to return.  
(Leonardo da Vinci)

We have been receiving a large number of inquiries from members who are suddenly unable to access all of the functionality associated with the NEBG website (<http://www.northeastbonanzagroup.com>). The most prevalent reason for this is either the member has updated their Internet Explorer to version 9, or they have purchased a new computer that already had version 9 installed. The reason for this problem is due to the way the new Internet Explorer (version 9) is written, and because of the security scripting that is contained within the NEBG website to ensure member information is kept confidential. Let me assure you that our web site is not alone in experiencing these issues, but rather this version of IE has similarly affected millions of other sites. Fortunately, there is a simple solution built into the new Internet Explorer browser that will restore the full functionality of our website.

Here are the steps to follow:

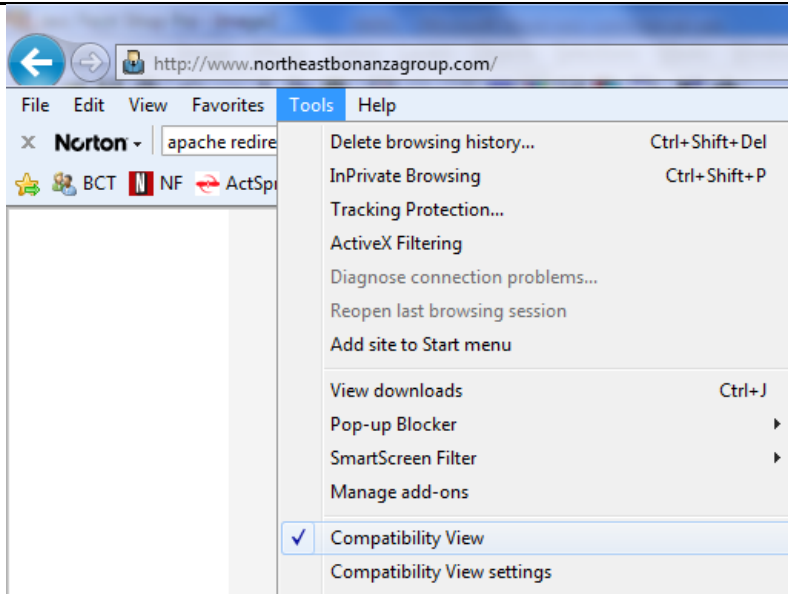

1. Open Internet Explorer and go to our website: <http://www.northeastbonanzagroup.com>
2. Locate the "Tools" menu item on the Internet Explorer toolbar

- A. If you are unable to locate the toolbar, it is most likely hidden. To show the toolbar, place your mouse pointer at the top of the Internet Explorer window where it does not lie upon any other item (ideally the mouse pointer will lie upon the blue area above the address box), and click the right mouse button one time.

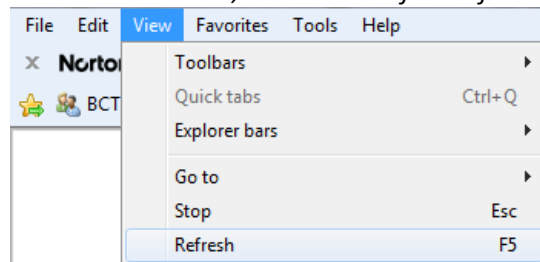

- B. A pop-up box will appear. Notice the 1<sup>st</sup> item in the box is titled "Menu bar" and does not have a checkmark next to it. Place your mouse pointer over the "Menu bar" item and click the left mouse button one time. The pop up box will disappear and the menu bar will now appear on the browser, usually just below the address box.
3. Mouse click on the "Tools" menu item and a list will appear. Locate and mouse click on the "Compatibility view" item in the list.

4. Now refresh the Internet Browser by either...

- a. Press the F5 key
- b. Mouse click the refresh icon located on the right end of the address bar: 
- c. Mouse click the "View" menu bar item, and then "Refresh" from the list that will appear.

5. Once the window refreshes, all of the website functionality should now be restored. Also, the website will now be added to the browser's Compatibility View settings and automatically correct itself during subsequent visits (No need to repeat these steps every time you visit our site).
